6 am to 3 pm

What you can do today to prevent the overpopulation of mosquitoes in your area!

Female mosquitoes need standing water to lay eggs, try these tips to eliminate mosquitoes by your home.

1. Turn over any unused flower pots to eliminate standing water.
2. Clear the rain gutters on your house of any leaves to prevent water from collecting.
3. Discard tires and any other yard debris that hold rainwater.
4. Refresh your birdbath's water every week.

If you should have any mosquito problems or questions on how you can help curb our city's mosquito population please contact us at 500-0065 / 968-1440 or e-mail RFlack@gulfshoresal.gov
